INT. J. CONTROL, 1996, VOL. 64, NO. 6, 1203–1206

SUBJECT INDEX (Vol. 64)

Adaptive control, deterministic, with slowly varying parameters, averaging analysis, 99
Adaptive model output following control, simplified, for plants with unmodelled dynamics, 61
Adaptive tracking controller for multiple-phase permanent-magnet machines, 997
Algorithm
  minimal observer synthesis type, robustness, 141
  regularized orthogonal least squares type, for constructing radial basis function networks, 829
Analysis and synthesis, robust, application of finite inclusions theorem, 511

Bounds in algebraic Riccati and Lyapunov equations, a survey and some new results, 377

Chaotic dynamics stabilization, modern control approach, 663
Compensators
  observer-based, for fixed-order H_∞ control, 441
Control
  adaptive
    deterministic, with slowly varying parameters, averaging analysis, 99
    for stochastic systems, robustness, 463
    partially decentralized, of interconnected systems with improved performance, 529
    simplified model output following type, for plants with unmodelled dynamics, 61
  H_∞-type
    of nonlinear time-varying systems with finite time horizon, 241
    via output feedback, for state delayed systems, 1
  iterative learning type, with non-zero initial error, robustness, 345
  linear quadratic optimal ouput feedback type, for systems with poles in a specified region, 1151
  mixed H_2/H_∞ type, via state feedback, for nonlinear systems, 899
  model reference adaptive type, with $L^{1+\alpha}$ tracking, 859
  multiple-surface sliding type, of a class of uncertain nonlinear systems, 691
  nonlinear dynamical systems, discrete-time model reference adaptive control using neural networks, 217
  output-feedback mixed H_∞/H_2 type, dynamic game approach, 263
  precision tracking type, of non-minimum phase systems with zero phase error, 995
  proportional/integral type, of nonlinear systems, 677
  recursive, of robotic motion, 775
  satellite systems, tethered, using thruster and offset strategies, 175
  sliding mode type, of multivariable nonlinear systems, 743
  swinging type, of nonlinear oscillations, 1189
  tracking type, of flexible joint manipulators, using only position measurements, 567
Control systems
  digital, in state-space models, improved stability robustness bound, 991
  MRAC type, with terminal sliding modes, 1165
  multivariable interval type, robust stability, 809
Controller
  adaptive tracking type, for multiple-phase permanent-magnet machines, 997
  iterative learning P-type, for robust tracking of nonlinear time-varying systems, 319
  self-tuning Clarke–Gawthrop type, robust stability, 719
Controllers, design, PWM type, for stabilization and tracking in derived DC-to-DC power converters, 301

Descriptor systems, optimal simultaneous stabilization via output feedback, 595
Design
  of class of continuous-time fuzzy control systems, and stability analysis, 1069
  of linear-quadratic servo systems with integral compensator, two-degree-of-freedom method, performance deterioration caused by observer introduction, 941
  of practically stable n-dimensional feedback systems, state-space approach, 29
  of PWM controllers for stabilization and tracking in derived DC-to-DC power converters, 301
Deterministic adaptive control, with slowly varying parameters, averaging analysis, 99
Difference systems, continuous-time type, robust stability, 985
Digital control systems in state-space models, improved stability robustness bound, 991
Discrete-event systems, stability, using Markov chains, 391
Discrete observability of wave equation on bounded domains in euclidean space, 281
Discrete-time H_∞ algebraic Riccati equation and parametrization of all H_∞ filters, 1129
Discrete-time model reference adaptive control, nonlinear dynamical systems, using neural networks, 217
Discrete-time nonlinear system, immersion by regular dynamic state feedback, into a linear system, 361
Discrete-time systems, residual generation and fault detection using an l_∞ technique, 155

Equations, linear difference type, with periodic coefficients, solution stability, 959
Error models with parameter constraints, 1089
Estimation, of state, robust, for uncertain systems with averaged integral quadratic constraints, 923

Fault detection, for discrete-time systems using an l_∞ technique, 155
Fault detection observer for bilinear systems, application to hydraulic drive system, 1023
Faults, detection and isolation by functional continuous deadbeat observers, 425
Feedback, output type
  H_∞ control, for state delayed systems, 1
  mixed H_∞/H_2 control, dynamic game approach, 263
Feedback systems, n-dimensional, design, state-space approach, 29
Filtering problem, H_∞ type, parametrization, discrete-time algebraic Riccati equation solutions, 1129
Frequency domain method, for decentralized stabilization, based on quasi-block diagonal dominance, 41
Frequency response bounds, mapping to the time domain, 335
Fuzzy control systems, continuous-time, stability analysis and design, 1069

Gain bounds of higher order nonlinear transfer functions, 765
Gaussian systems, jump linear, stabilization without mode observations, 631
Generalized input–output equations and nonlinear realizability, 615

H^∞ control, of systems with compensators which read the command signal, 9
H_∞-control of nonlinear time-varying systems with finite time horizon, 241
H_∞ filtering problem, parametrization, discrete-time algebraic Riccati equation solutions, 1129
Hydraulic drive systems, application of bilinear fault detection observer, 1023

Identification
  fast orthogonal type, of nonlinear stochastic models and radial basis function neural networks, 871
  robust, in the disc algebra, using rational wavelets and orthonormal basis functions, 409
Immersion of discrete-time nonlinear system into a linear system by regular dynamic state feedback, 361
Input–output equations, generalized, nonlinear realizability, 615
Interconnected systems, improved performance using partially decentralized adaptive control, 529

L_2-gain synthesis, robust, for class of uncertain nonlinear systems, 1177

Linear quadratic optimal output feedback control for systems with poles in a specified region, 1151
Linear time-invariant systems
  reachability, two-dimensional measures, 195
Lyapunov and Riccati equations, algebraic, bounds, survey and new results, 377
Lyapunov function with quadratic form plus integral term, existence, necessary and sufficient conditions, 705

Machine, multiple-phase permanent-magnet type, adaptive tracking controller, 997
Manipulators, flexible-joint type, tracking control using only position measurements, 567
Mapping frequency response bounds to the time domain, 335
Matrix, polynomial type, inverse computation, Laurent expansion evaluation, 563
Model output following control, adaptive, simplified, for plants with unmodelled dynamics, 61
Model reference adaptive control
  systems with terminal sliding modes, 1165
  with $L^{1+\alpha}$ tracking, 859
Modelling of errors in adaptive systems, with parameter constraints, 1089
Models
  for systems with delay, reduced-order, 731
  nonlinear, stochastic, fast orthogonal identification, 871
Multiple-surface sliding control of a class of uncertain nonlinear systems, 691
Multivariable nonlinear systems, sliding mode control, 743

Nehari problem, discrete, characterization and computation of class of suboptimal and optimal solutions, 483
Neural network, radial basis function type
  construction using regularized orthogonal least squares algorithm, 829
  fast orthogonal identification, 871
Nonlinear discrete-time system, immersion into a linear system by regular dynamic state feedback, 361
Nonlinear dynamical systems, discrete-time model reference adaptive control using neural networks, 217
Nonlinear non-minimum phase systems, stable inversion, 81
Nonlinear systems
  mixed H_2/H_∞ control via state feedback, 899
  multivariable, sliding mode control, 743
  output frequency characteristics, 1049
  proportional and integral control, 677
  uncertain, multiple-surface sliding control, 691
Nonlinear time-varying systems
  P-type iterative learning controller for robust output tracking, 319
  with finite time horizon, H_∞-control, 241
Numerically robust pole assignment for second-order systems, 1113

Observability, discrete, of wave equation on bounded domains in euclidean space, 281

Observer, for fault detection of binlinear systems, application to hydraulic drive systems, 1023
Observer-based compensators for fixed-order H_∞ control, 441
Optimal simultaneous stabilization of descriptor systems via output feedback, 595
Oscillations, nonlinear, swinging control, 1189
Output-feedback mixed H_∞/H_2 control, dynamic game approach, 263
Output frequency characteristics of nonlinear systems, 1049

Pole assignment, numerically robust, for second-order systems, 1113
Polynomial matrix, inverse computation, Laurent expansion evaluation, 563
Positive realness, strict, robust, finite test, 887
Power converters, derived DC-to-DC type, PWM controllers design for stabilization and tracking, 301
Proportional and integral control of nonlinear systems, 677

Reachability, two-dimensional measures, for linear time-invariant systems, 195
Realizability, nonlinear, generalized input–output equations, 615
Recursive control of robotic motion, 775
Regularized orthogonal least squares algorithm for constructing radial basis function networks, 829
Residual generation and fault detection for discrete-time systems using an l_∞ technique, 155
Riccati and Lyapunov equations, algebraic, bounds, survey and new results, 377
Riccati equation approach to robust L_2-gain synthesis for a class of uncertain nonlinear systems, 1177
Robotic motion, recursive control, 775
Robust adaptive tracking using the internal model principle, 127
Robust analysis and synthesis, application of finite inclusions theorem, 511
Robust identification in the disc algebra using rational wavelets and orthonormal basis functions, 409
Robust output tracking using a sliding-mode controller/observer scheme, 967
Robust stability
  of Clarke–Gawthrop type self-tuning controller, 719
  of continuous-time difference systems, 985
  of multivariable interval control systems, 809
Robust state estimation for uncertain systems with averaged integral quadratic constraints, 923
Robustness
  of adaptive control for stochastic systems, 463
  of iterative learning control with non-zero initial error, 345
  of minimal observer synthesis algorithm, 141

Satellite systems, tethered, control using thruster and offset strategies, 175
Servo systems, linear-quadratic type, with integral compensator, two-degree-of-freedom design method, performance deterioration caused by observer introduction, 941
Sliding mode control of multivariable nonlinear systems, 743
Stability
  of a class of discrete event systems using Markov chains, 391
  of solutions of linear difference equations with periodic coefficients, 959
  robust
    of Clarke–Gawthrop type, self-tuning controller, 719
    of continuous-time difference systems, 985
    of multivariable interval control systems, 809
Stability analysis and design for a class of continuous-time fuzzy control systems, 1069
Stability robustness bound, improved, for digital control systems in state-space models, 991
Stabilization
  decentralized, frequency domain method, based on quasi-block diagonal dominance, 41
  of an uncertain linear dynamic system by state and output feedback, quadratic stabilizability approach, 839
  of chaotic dynamics, modern control approach, 663
  of jump linear gaussian systems without mode observations, 631
  simultaneous, optimal, of descriptor systems via output feedback, 595
Stochastic systems, robustness of adaptive control, 463
Swinging control of nonlinear oscillations, 1189
Synthesis and analysis, robust, application of finite inclusions theorem, 511

Time-invariant linear systems, reachability, two-dimensional measures, 195
Time-varying nonlinear systems, with finite time horizon, H_∞-control, 241
Tracking control
  of flexible joint manipulators using only position measurements, 567
  precision, of non-minimum phase systems with zero phase error, 995
Tracking, robust
  adaptive, using the internal model principle, 127
  of output, using sliding-mode controller/observer scheme, 967
Transfer function, mapping frequency response bounds to the time domain, 335
Transfer functions, nonlinear, higher-order, gain bounds, 765

Uncertain linear dynamic system stabilization by state and output feedback, quadratic stabilizability approach, 839
Uncertain systems
  nonlinear
    multiple-surface sliding control, 691
    robust L_2-gain synthesis, Riccati equation approach, 1177

with averaged integral quadratic constraints, robust state estimation, 923
Uncertainty, real and complex multiple-block type with internal matrix structure, generalized mixed-μ bounds, 789
Unmodelled dynamics, plants with, simplified adaptive model output following control, 61

Wave equation, discrete observability on bounded domains in euclidean space, 281
